

INTRODUCTION TO CAMTASIA RELAY

Updated 04/21/14

Camtasia Relay is a lecture capture software program which is designed to streamline the workflow of capturing a live presentation with an audio recording or narration. Camtasia Relay supports a wide variety of video formats and allows the audience to view the presentation on multiple playback devices via iTunes U and e-mail. At the University of South Alabama, the Camtasia Relay program works in conjunction with iTunes U and Camtasia Relay server to allow easy storage and access of presentations.

Camtasia Relay Process

There are two major processes in operating Camtasia Relay: the recorder which runs on your computer, and the server which processes and publishes all presentations in various formats which are initially setup as profiles.

Recorders (Mac, Win, Portable)

Camtasia Relay works on PC and Mac platforms, and also includes a Portable Recorder installation. Go to the following link to login and download the program: <https://camtasia.usouthal.edu/relay>. Use your JagMail username (e.g. joesmith) and JagMail password to login.
