HOW TO WORK WITH PARTIAL CREDIT IN SAKAI

In Sakai, when you are working with multiple choice questions, you have several options when it comes to grading the answers. When you select *Single Correct* answer, you can choose to use negative marking or partial credit. Negative marking will take away points if a student answers the question incorrectly. Partial credit will award a percentage of point value if a student chooses a partially correct answer.

1. First, select to add a multiple choice question into your test.

Figure 1. *Multiple Choice* question type

2. For a true multiple choice question, select *Single Correct* (choose *Multiple Correct* for a multiple answer question). Click on *Enable Partial Credit*. Clicking on *Reset to Default Grading Logic* will default your choice back to *Single Correct*.

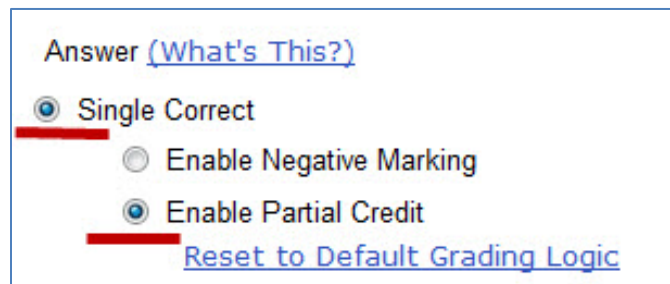

Figure 2. *Enable Partial Credit* button

3. Type the question into the *Question Text*. Type answers to the answer boxes. Distinguish the correct answer by clicking on the button on the left from the answer box. If you want to acknowledge an answer as partially correct, type the percentage of the point value to the box on the right from the answer box.

4. Finish the question the way you would any other question, and click *Save*.
