TABLE OF CONTENTS

FRONT COVER PHOTO: Jane Newman Williams enjoys the view of the Mobile-Tensaw Delta from the waterfront of Blakeley State Park. Covering more than 300 square miles, the Mobile-Tensaw River Delta is the 2nd largest delta-wetland in the conterminous United States. (Photo by ***Aaron Williams***)

BACK COVER PHOTO: Hurricane Helene, the costliest hurricane of the 2024 season, is shown in this satellite image taken at sunrise on September 26. At the time of the photo, Helene was rapidly intensifying over the eastern Gulf of Mexico 320 miles southwest of Tampa. The storm was moving NNE at 12 mph with peak winds at 100 mph. However, by mid-evening Helene became a category 4 hurricane with winds reaching 140 mph. (Photo courtesy of ***NOAA***)

Astronomical data: U.S. Naval Observatory. *Tidal information*: National Ocean Survey.

Temperature and precipitation records: Courtesy of the National Weather Service.
When a record has been tied on pages 3-14, only the latest record is shown.

Typography, layout and printing: **Gwin's Commercial Printing**

The authors wish to thank **Jeffrey Medlin** for his contribution on the 2024 hurricane season and **Aimee Inscore Barron** for her assistance in proof reading the manuscript. Many thanks to the National Weather Service for providing damage photos of the Sand Mountain tornado.

(All temperatures in this book are in Fahrenheit)

ASTRONOMICAL EVENTS FOR 2025

BEGINNING OF SEASONS

Spring: March 20, 4:01 a.m. CDT
Summer: June 20, 9:42 p.m. CDT
Autumn: September 22, 1:19 p.m. CDT
Winter: December 21, 9:05 a.m. CST

ECLIPSES

In the year 2025 there will be two eclipses of the Sun and two of the Moon.

1. Total lunar eclipse, March 14, visible in Mobile.
2. Partial eclipse of the sun, March 29, not visible in Mobile.
3. Total lunar eclipse, September 7, not visible in Mobile.
4. Partial eclipse of the sun, September 21, not visible in Mobile.

BEST METEOR SHOWERS

(20 or more meteors at the peak hour)

Name	Peak Period
Quadrantids	Jan. 3-4
Lyrids	Apr. 22-23
Eta Aquarids	May 6-7
Perseids	Aug. 12-13
Orionids	Oct. 21-22
Geminids	Dec. 13-14

2024 MOBILE AREA WEATHER HIGHLIGHTS

JANUARY 8-9 *HEAVY RAIN* A winter storm that developed over the Texas Panhandle on the 8th produced periods of heavy rain on the 8th and 9th. 1.80" fell at the Mobile Regional Airport from a warm front on the 8th followed by a daily record of 1.45" on the 9th with the passage of a cold front.

JANUARY 17 *COLD* An Arctic air mass reached the Mobile area on the 16th resulting in the coldest temperature of the 2023-24 winter on the 17th when the mercury fell to 19° at the Mobile Regional Airport.

MAY 13 *HEAVY RAIN* A stationary front along the Gulf Coast and a series of upper air disturbances produced the heaviest rain of the year at the Mobile Regional Airport. A total of 6.85" fell on May 13, a record for the date.

JUNE *EXCESSIVE HEAT* The dominance of a ridge of high pressure across the South in June resulted in 25 days of high temperatures of 90° and higher. There were 9 days of 95° or higher with a peak temperature of 98° on the 25th.

AUGUST *EXTREME HEAT* The mercury climbed to 90° or higher on 29 days with 19 days reaching 95° or above. In addition, there were four days at 99° or higher with a daily record of 101° on the 14th.

OCTOBER *VERY WARM AND VERY DRY* Only .52" of rain fell in Mobile during the month with all of the measurable rain falling on the 4th. This total was 3.43" below normal. Meanwhile, the average temperature for the month was 3.4° above normal. The average high of 85.1° was the warmest ever for October with daily records occurring on the 24th (88°), 25th (89°), and 90° on the 26th and 27th . The high recorded on the 27th was Mobile's latest 90-degree reading.

2024 HURRICANE SEASON IN REVIEW

By Jeffrey M. Medlin
Tropical Cyclone and Winter Weather Meteorologist,
Instructor
Department of Earth Sciences, University of South Alabama

As the 2024 season approached, forecasters faced a unique combination of factors: exceptionally warm sea-surface temperatures across the Atlantic Main Development Region (MDR), the Caribbean, and the Gulf of Mexico, alongside a potential reduction in vertical wind shear due to an expected transition from El Niño to La Niña conditions. This raised the question: could 2024 become one of the most active seasons on record? Or maybe not? The uncertainty hinged on the timing of the weak La Niña. Would it arrive before the climatological peak in mid-September, leaving enough time for a record-breaking number of storms, or would it arrive too late to have such an impact?

The season began strong when Hurricane Beryl formed in the Atlantic MDR on June 28th. Beryl was the earliest-forming Category 5 on record and also the strongest to develop within the Atlantic MDR before the month of July. Beryl moved through the Caribbean and the Gulf before making landfall near Matagorda, TX, on July 8th. Things were looking favorable for 2024 to become quite active.

As of November 2024, La Niña has still NOT arrived, but despite this, the 2024 Season has certainly made its place in the record books. According to records dating back to 1851, this season will rank inside the Top 25 for number of hurricane and major hurricane days and inside the Top 15 for number of named storms in a single season (source: Colorado State University Department of Atmospheric Science).

The 2024 Season was above average and produced: **18** named tropical cyclones (average 14); **11** hurricanes (average 7); and **5** Major Hurricanes (Category 3 or higher; average 3). Unfortunately, three of the five major hurricanes that developed struck the U.S.! Over half of this season's named storms occurred after the mid-September climatological peak, and every named storm that developed past the peak became a hurricane except four, and four of the seven hurricanes were major hurricanes!

Other notable observations include:

- Of the five U.S. hurricane strikes, only one (Beryl), originated from a west African (or Cape Verde) easterly tropical wave. The others formed in the Gulf of Mexico or Caribbean.
- Category 5 hurricanes (sustained 1-min winds >156 mph) are rare! Beryl (Jun) and Milton (Oct) achieved that status.
- The Florida Big Bend and western FL Peninsula endured three direct landfalls this season from Debby, Helene, and Milton.
- An extensive swath of wind damage was experienced far inland along Helene's track from its landfall location in Florida, across Georgia, and into the Carolinas. The southern Appalachian region experienced one of the most catastrophic flash flood events in modern U.S. history! The flooding rains produced mudslides that buried a still-unknown number of people. Entire towns were lost. It washed away homes and destroyed hundreds of lives.

Name	Status	Month	Max Wind (mph)	Min Pressure (mb)
Alberto	TS	Jun	50	**993**
Beryl	**MH**	Jun-Jul	165	934
Chris	TS	Jun-Jul	45	1005
Debby	H	Aug	80	979
Ernesto	H	Aug	100	967
Francine	H	Sep	100	972
Gordon	TS	Sep	45	1004
Helene	**MH**	Sep	140	938
Isaac	H	Sep	105	968
Joyce	TS	Sep-Oct	50	1001
Kirk	**MH**	Sep-Oct	145	934
Leslie	H	Oct	105	972
Milton	**MH**	Oct	**180**	**897**
Nadine	TS	Oct	60	1003
Oscar	H	Oct	85	986
Patty	TS	Nov	55	982
Rafael	**MH**	Nov	105	956
Sara	TS	Nov	50	997

KEY: TS = Tropical Storm, H = Hurricane, **MH** = Major Hurricane

MAJOR TORNADO ON SAND MOUNTAIN

Photo courtesy of the National Weather Service

One of the strongest tornadoes to hit Alabama in 2024 occurred during the late evening of May 8 in Jackson County. The tornado created a path of destruction for 12 miles across Sand Mountain. Although there were no fatalities, several injuries were reported. A National Weather Service survey team determined that the maximum width of the funnel was 880 yards and estimated a peak wind of 140 mph (EF-3). The above and below photos show the damage produced when the tornado was an EF-2 along Highway 422. This was nothing unusual for the residents of Sand Mountain. The flat-topped mountain has the highest frequency of tornadoes in Alabama. Tornado researchers believe that when a storm system tracks east across the Tennessee Valley, Sand Mountain creates wind shearing that is favorable for tornado formation.

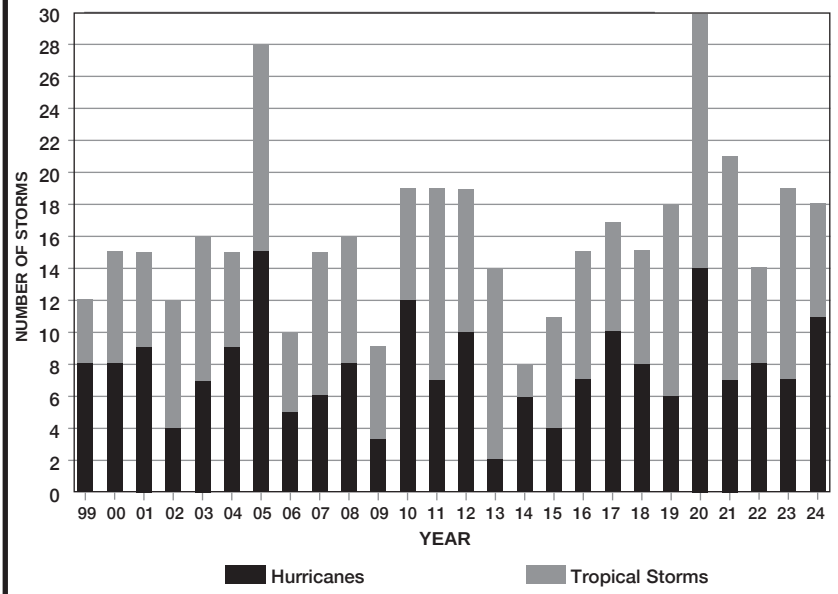
TROPICAL STORMS AND HURRICANES 1999-2024



The above graph shows the number of tropical storms and hurricanes each year from 1999 through 2024 with hurricanes shown in black and tropical storms in gray. The 30 storms in 2020 is the all-time record for a single season. During this 26-year period, Michael (2018) was the only hurricane to reach the U.S. as a category 5 storm. In fact, since 1900 there have only been three other hurricanes to strike the U.S. as a category 5. Those storms were Camille (1969), Andrew (1992) and the Labor Day Hurricane (1935).

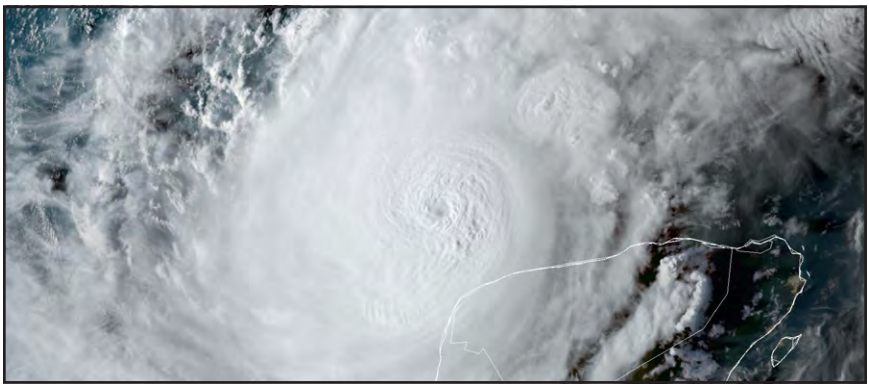


Photo courtesy of NWS

Hurricane Milton, which made landfall near Sarasota, Florida on October 9, was strongest over the southern Gulf of Mexico. In this satellite photograph taken at 5:36 p.m. CDT on October 7, Milton was a category 5 off the Yucatan Peninsula with maximum sustained winds of 180 mph. The "billowy" clouds that can be seen around the center of Milton's circulation were massive thunderstorms. Milton was moving east at 10 mph with a central pressure of 905 mb (26.73").

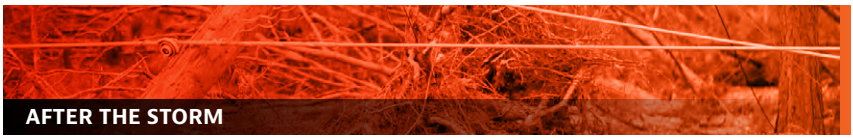
Alabama Power

ARE YOU STORM READY?

Make a safety plan before severe weather strikes. Alabama can experience severe weather any time of year. That's why Alabama Power is prepared to work quickly and safely to restore service. We work around the clock to achieve a 55% faster outage restoration time than the national average – and we always value safety above all else. Learn about the things you can do to prepare for severe weather and its aftermath.

BEFORE THE STORM

1. Charge cellphones and other electronic devices and have a battery-operated weather radio to stay informed.
2. While portable generators can help keep appliances running during outages, they can also be very dangerous when used improperly. Be sure to thoroughly read the manufacturer's instructions before use.
3. Create a family plan for emergencies and discuss how to stay safe in all weather conditions.
4. Set the thermostat to a comfortable level in your house and keep doors and windows closed. That way, in the event of an outage, your house will stay relatively comfortable for about 48 hours.
5. In the event of a tornado, plan to seek shelter inside a sturdy building on the lowest level. Choose a small room with no windows, such as an interior closet, hallway or bathroom.



AFTER THE STORM

1. Report an outage or a hazardous situation, such as a downed power line, at AlabamaPower.com or by calling Alabama Power at 1-800-888-APCO (2726) or local law enforcement.
2. Make sure roads are safe before driving. Even after the storm, roads can still be dangerous due to debris and other potential damage.
3. Never drive over or under downed power lines and keep children and pets away from them. Be sure to stay away from fallen trees or debris where downed lines can be hiding. Never attempt to remove tree limbs caught in downed power lines.
4. In the event of an outage, turn off appliances to avoid any potential safety hazards when power is restored. If using a portable generator, only directly connect essential appliances, such as your refrigerator. Plugging portable generators into your household electrical wiring can cause serious injury.
5. To avoid carbon monoxide poisoning, always operate portable generators outdoors in a well-ventilated, dry area away from windows and air intakes to the home.

2025 PREDICTED TIDES FOR MOBILE AND VICINITY

(See Pages 34-36)

TIDES

The tides are caused by the gravitational attraction of the moon and sun on the Earth. The moon is the primary tide force. As the Earth turns eastward on its axis, the tides move westward somewhat after the passage of the moon. The expected tide pattern is two high and two low tides in 24 hours (a semi-daily or semi-diurnal tide pattern). The Gulf Coast, however, has a pattern that usually has only one high tide and one low tide in 24 hours (a daily or diurnal pattern) except for several days during the month. Two to seven days a month will have two high and two low tides during which fishing is said to be poor.

TIDES AND WINDS

Mobile Bay is relatively shallow being less than 15 feet deep except in the ship channel (40 feet deep, 300 feet wide) and at the entrance to the Bay where natural inflow and outflow has made it deeper. Strong north winds that often accompany cold fronts may lower the water level of Mobile Bay causing boats to be grounded.

Likewise, strong south winds bring high water levels to the Bay producing flooding that has often closed the Causeway. Strong winds can cause greater differences in Bay water levels than the tides.

TIDE CORRECTIONS

Tides given in the following tables are made up from National Ocean Survey data. Tides are based on **mean low water** (MLW) and are the predicted tides in feet and tenths of feet. A correction must be applied to the times and heights given in the tables for places other than the primary tides stations. For example, at Fort Gaines, at the Mobile Bay entrance, the tides will occur earlier (see Tidal Differences below). The High Tide is one hour and fifty-one minutes sooner at Fort Gaines (-1h51m) and the Low Tide is one hour and forty-nine minutes sooner (-1h49m) than at the mouth of the Mobile River. These times must be subtracted from the times listed in the Tide Tables. The height of predicted High Tide at Fort Gaines is also two-tenths of one foot less than that listed in the tables, hence, subtract this amount (-0.2) from the height of High Tide given to determine High Tide height at Fort Gaines.

TIDE CORRECTIONS FOR OTHER LOCATIONS BASED UPON THE TIDES AT THE MOUTH OF THE MOBILE RIVER (h=hours, m=minutes)

Place	Time		Height (ft.)	
	High	Low	High	Low
Mobile Pt. (Ft. Morgan)	-1h 46m	-1h 32m	-0.3	0.0
Ft. Gaines				
Mobile Bay entrance	-1h 51m	-1h 49m	-0.2	0.0
Bon Secour				
Bon Secour River	-1h 13m	-1h 17m	+0.1	0.0
Fowl River				
Mobile Bay entrance	-0h 19m	-0h 09m	0.0	0.0
Great Point Clear	-1h 03m	-0h 57m	-0.1	0.0
Lower Hall Landing				
Tensaw River	+2h 16m	+3h 05m	-0.2	0.0

ROBERTSDALE
POWER EQUIPMENT

22965 Hwy 59 South Robertsdale, AL 36567
251-947-5372

Serving The Baldwin County Community For 45 Years.

With over 45 years in the industry, Robertsdale Power Equipment offers a diverse range of top-brand lawn and garden equipment, including lawn mowers, chainsaws, and string trimmers.

Specializing in servicing both commercial and residential models, our certified mechanics are adept at repairing various makes and models, making us a trusted choice in the area for top-notch service.
